

# HOLLOWCORE RESIDENTIAL FLOOR SYSTEM

# ADD MORE LIVING SPACE USING THE SAME FOOTPRINT

Ever wonder why we don't continue building the basement to include the space that's under your garage?

Why leave this space unused when a typical attached garage that's 24 by 24 foot can add more than 575 square feet of extra living space for you and your family!

Just  
**Think**  
Of what you  
could  
Do with that  
**Extra  
Legroom?**

- ✓ Media Room?
- ✓ Virtual Golf Room?
- ✓ Recreation Room?
- ✓ Home Gym?
- ✓ Dream Office?
- ✓ Games Room?
- ✓ Kids Play Area?
- ✓ Or maybe just that "we-never-have-enough-storage" Room?

Lafarge's Hollowcore Residential Structural Floor System gives you the freedom to make the most of your land lot and take advantage of advanced and innovative building solutions.

Hollowcore not only adds to your living space, but is also energy efficient, saving you money on heating and cooling costs. Hollowcore is virtually sound proof, allowing you to finally let your kids play their musical instruments or games as loud as they want or a theater room that doesn't wake the neighbors.

## A REVOLUTIONARY WAY OF BUILDING

Today most families today don't need more sleeping space or larger bedrooms, they need more LIVING space. That's where the Hollowcore system comes in. As you excavate the dirt for you basement , simply continue to dig where the garage will be built and pour foundation walls around the basement AND garage. Wood framing can be used for main floor structure support and Hollowcore slabs as your garage floor, which ensures the Canadian Building Code approved amount of weight bearing for your vehicles
