

STRUCTURAL PRECAST CONCRETE

Precast Structural solutions that are ideal for all types of Commercial, Industrial, Infrastructure projects, plus virtually any other application that calls for strength, durability, beauty, sustainability and fast-track construction

Precast Bridge Girders

Lafarge fabricates a wide variety of bridge girders, ranging from precast concrete NU Girders, SL Girders, Box Girders and custom girders sizes.

Our pre-stressing systems enable longer spans and higher loading capacity, combined with the size and versatility of our precast facility means we are able to produce multiple bridge girders at the same time. We can work within the tight time constraints required for modern-day infrastructure projects.

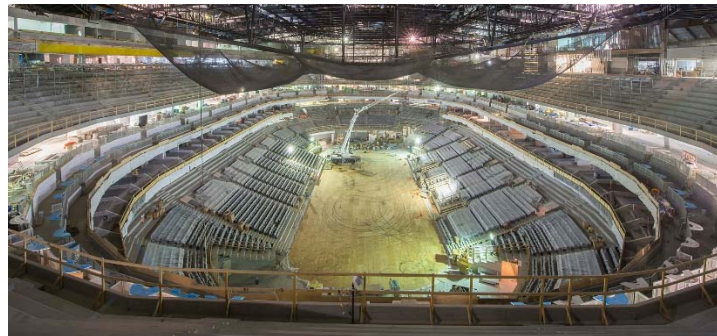

Precast Arch Structures

Lafarge designs and fabricates precast arch segments that are as solutions for access roads, wildlife crossing and river crossings.

Precast modular arch segments provide a high strength element that also achieve long spans. The arch segments can be install efficiently allowing for rapid construction and completion .

Precast is manufactured with high quality, durable, cost effective and efficient solutions. Installation services are available on everything we provide.

Precast Parking Structures

Lafarge designs and fabricates all parkade elements with high quality, durable, cost effective and efficient precast concrete. Structural parkade elements can include double tee's, columns, spandrel panels, elevator shaft, stair cases for any number of parking stalls or levels required. The precast can incorporate architectural elements to meet aesthetic design.

Precast Arena Structures

Working within a larger design team, Lafarge can designs and fabricates and install all of the precast structural elements including the bleacher, beams, columns, walls, step units, etc.
